

Parasite organism list:

Protozoa:

Entamoeba histolytica
Giardia lamblia
Plasmodium falciparum
Plasmodium vivax
Leishmania spp.
Cryptosporidium parvum
Babesia
Toxoplasma gondii
Trypanosoma cruzi
Trypanosoma brucei

Nematodes:

Enterobius vermicularis
Strongyloides stercoralis
Ascaris lumbricoides
Ancylostoma braziliense
Trichuris trichuria
Ancylostoma duodenale
Necator americanus
Toxocara canis
Toxocara cati
Trichinella spiralis (name recognition)

Trematodes:

Schistosoma mansoni
Schistosoma japonicum
Schistosoma haematobium

Cestodes:

Cysticercosis (Taenia solium)
Echinococcus granulosus
Taenia solium
Taenia saginata
Diphyllobothrium latum

Arthropods:

Cimex lectularius

Fungi List:

Histoplasma capsulatum
Coccidioides immitis
Blastomyces dermatitidis
Candida albicans
Sporothrix schenckii
Aspergillus
Cryptococcus neoformans
Ringworms: Trichophyton,
Epidermophyton, Microsporum (name
recognition only)
Zygomycetes (Rhizopus, Mucor)

Drug list (know which group they belong in and mechanism of action, if taught):

Antifungals:

azoles - itraconazole,
fluconazole
polyene - amphotericin B
echinocandins –
capsosungin
griseofulvin
allylamines - terbinafine
5-fluorocytosine

Anti-helminths:

mebendazole
thiabendazole
praziquantel
niclosamide

Anti-protozoals:

metronidazole
chloroquine, mefloquine,
primaquine
amphotericin B
